

## **Introduction of UKAD and IV30 to our customers**

As many could see during the ADISC session in Les Ancizes, the UKAD and IV30 construction is now well advanced.

- UKAD will be equipped with a 4,500 tons forging press dedicated to the production of titanium semi-finished products (billets, bars...).
- IV30 is a new vacuum furnace based on the latest technology, to improve Aubert & Duval's range capabilities thanks to larger crucible size.

Both investments to be operational by summer time.

You will find attached 2 short presentations that will help you present these investments and their benefits. We invite you to share them widely.

In case of further question, please contact your Market Manager, or Pascal Chovet for UKAD and Christophe Rebillon for IV30.

Jean-Christophe Andlauer
