

The 'TAF' brochure in English *Heat Treatment Services* is now also available!

As a complement to our TAF brochure in French (see EscalADe N°32), we are now releasing its English translation.

Providing demanding customers with high-quality technical services is part of Aubert & Duval strategy. As such, the TAF activity based in Gennevilliers, plays a major role to support our sales of carburizing and nitriding grades, and of toolsteels. It allows Aubert & Duval to offer a complete 'solution': grade recommendation and selection, material supply and metallurgy 'finishing'. This is particularly valid for customers in markets such as aerospace, transportation and other specialties, as well as for toolmakers.

We remind you that this activity is a fully-integrated part of Aubert & Duval.

You will find, attached, a .pdf version of the brochure, for your own use/reference only. Customers' copies can be ordered at the following e-mail address: documentation-ad@eramet-aubertduval.com.

We encourage you to distribute this brochure widely, as a concrete example of what advantages A&D can bring to its customers by providing a complete technical service.

We take this opportunity to let you know of 2 recent 'TAF' investments, to be operational from the beginning of 2011:

- an ammoniac vapour cracking system, for a better protection of the environment
- a new heating furnace to improve our capabilities

Sandrine Annebicque
