

## Aubert & Duval Aero: Exhibiting in the US for the first time

AD has been attending US Aero seminars\* and exhibitions on a regular basis. However; it was the first time to be present with a dedicated AD booth supported by AD staff + visitors from the head-office.

This was at the opportunity of the "Inaugural Aero Engineering USA Conference" on 2, 3 November 2010. The conference brings together layers of aerospace and aeronautical engineering supply chains, engineering service providers, and sub-supply groups into one single environment.

Invited attendees included aerospace design, development, manufacturing & integration engineering communities covering Civil Aircraft programs, Helicopter / Rotary Aviation programs, Military Aviation programs, Business jet & General Aviation programs, through to Space frame & Launch Vehicle programs. Over 300 companies exhibited at the show with an additional 700 companies participating.

A sampling of companies we were able to interact with, and which were present at the show included, but are not limited to:

ALCOA FASTENING – BAE SYSTEMS – BOEING – CAL DROP FORGE – GE AVIATION – GKN – HONEYWELL – KHI – LOCKHEED – MOOG – PARKER AEROSPACE – RAYTHEON – TRIUMPH – UTC

In line with our strategy to be more present in the North American market, we will continue to develop more conspicuous actions, so as to increase our prospects' awareness.

David Swindells
