

Welcome to the aeronautic world! Our technical glossary is born!

Everyday customers use technical words to define parts they want AD to produce. Therefore newcomers need to acquire a very specific vocabulary to understand our fabulous world.

What is an underwing fitting, a pylon diaphragm, a canted beam? Where is it located? What does the finish part look like? What is its translation in French or English?

Our glossary provides a technical basis to train you in both languages. Also, some pictures give a concrete view of the parts (please refer to the attached document to learn how to access the pictures).

Do not hesitate to consult it on a regular basis at the below I-Catcher link.

[Aero glossary](#)

We will constantly feed this tool with new terms. However, if you think a translation is missing or incorrect, or if you have any helpful picture to upload, please contact [Nathalie Bourgis](#) who will update the glossary.
