

## A NEW GRADE FOR LONGER SERVICE LIFE IN DIE CASTING

### SDC™ Super Die Casting

A 12-page technical brochure dedicated to the SDC™ is now available.

The lifetime of light alloy die cast parts highly depends on the thermal fatigue behavior of the material. Aubert&Duval has created a grade for improved thermal fatigue resistance while maintaining high properties of resistance to abrasion at high temperature. With a high Molybdenum and Nickel content, the SDC™ yields an improved compromise between crack initiation and propagation. You will find all technical details in the brochure.

you will find, attached, a pdf version of two documents:

\* the 12-page Technical SDC™ brochure, Customers' copies can be ordered at the following e-mail address : [documentation-ad@eramet-aubertduval.com](mailto:documentation-ad@eramet-aubertduval.com)

\* an ad on the SDC™ showing a synthesis of main SDC™ properties compared to other Aubert&Duval die casting grades. Appearing in " European Tool and Mould Making ", April issue.
